

Cardinal, John Kenneth.

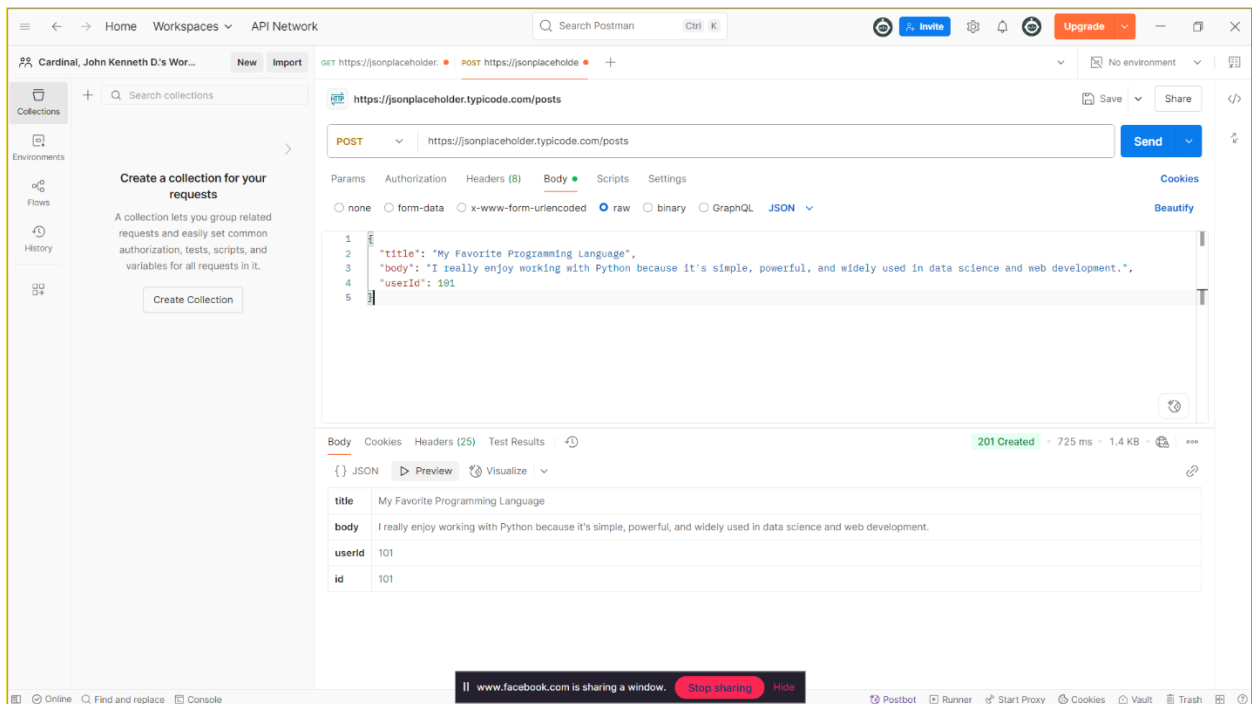

BSIT-4107

The GET request with URL: <https://jsonplaceholder.typicode.com/posts> returns a listing of available post objects. Each object can vary in its attributes in this case `userId`, `id`, `title`, and `body`. It is typical sample data used for testing. I then made a POST request with the title, body of why I like Python, and a `userId` of 101. The server returned with a 101 Created. This means the server accepted my post. The server also returned my original post data, but provided me with a new `id` of 101.

The screenshot shows the Postman interface with a GET request to `https://jsonplaceholder.typicode.com/posts`. The response is a 200 OK status with a response time of 956 ms and a body size of 8.02 KB. The response body is a JSON array of 8 post objects.

The screenshot shows the Postman interface with a POST request to `https://jsonplaceholder.typicode.com/posts`. The request body is a JSON object with the following data:

```
{  "title": "My Favorite Programming Language",  "body": "I really enjoy working with Python because it's simple, powerful, and widely used in data science and web development.",  "userId": 101}
```

The response is a 201 Created status with a response time of 725 ms and a body size of 1.4 KB. The response body is a JSON object with the following data:

```
{  "title": "My Favorite Programming Language",  "body": "I really enjoy working with Python because it's simple, powerful, and widely used in data science and web development.",  "userId": 101,  "id": 101}
```
